DETAILED ACTION

The Applicants' Response filed 4/19/05 has been considered in preparing this Office action. Applicants' Remarks/Arguments have overcome rejections recited in the prior Office action.

EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with applicants' attorney, Mr. Marc E. Brown, Reg. No. 28,590 on 5/23/05.

The application has been amended as follows:

In The Claim Section:

Claims 36-53, 56, 57 and 62-74 are canceled.

Claim 26: in line 4, after "a first electrical", delete "switch ing", insert --switching--.

(see the attached " Examiner's Amendment Sheet").

Allowable Subject Matter

2. Claims 1-35, 54, 55 and 58-61 are allowed, and are renumbered as 1-41.

The following is an examiner's statement of reasons for allowance:

Art Unit: 2674

The claim invention is directed to a system and process that reduces the energy that is consumed by charging and discharging of driver lines in a display device. Applicants' Remarks provided in pages 2-4 of the Amendment have specifically pointed out the patentable novelty features and the differences between the claimed invention and the prior art of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

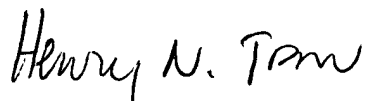

3. The prior art made of record and not relied upon is considered pertinent to applicants' disclosure. They are U.S. Patents Nos.: 6,271,783 (Cairns et al) and 6,094,192 (Kobayashi et al) that teach display systems which consumes less power by using a quasi-adiabatic charging and discharging process or recovering and reutilizing the energy stored in the common electrode.
